Attention notes:

We do not recommend use of instant hot water taps for this type of sink, repeated use may prematurely age the sink surface.

Great care is to be taken not to release the water directly on to the sink surface at full temperature.

The dimensions on ceramic fireclay products are subject to wider tolerances due to the nature of this natural material and the firing process.

***Important fabricator notes for Undermount, Apron Front & Flushmount sinks:**

The cut out size indicated is aligned with outside edge of the bowl top radius (similar to the example below):

You should confirm with your client if the work surface cutout is to be cut flush, inside or outside this suggested perimeter shape & size.

If you create the cutout smaller or larger than the indicated size then the fit of the accessories may be affected and should be physically checked.

General:

All details are provided in good faith but do not include the tolerances of the material or manufacturing process.

We request that a test cutout is made in scrap timber and checked against the actual sink to be installed before committing to cutting the final work surface.

Abode can not accept liability for problems or costs incurred by failure to follow this request.

CAD cutout files can be downloaded from www.abodedesigns.co.uk
