V primeru večjega pritiska vode kot 8 bar v vodnem sistemu, je potrebno uporabiti reducirni element.

In case of operating pressures higher than 8 bar it is recommended to install a pressure reducer on the feeding tubes.

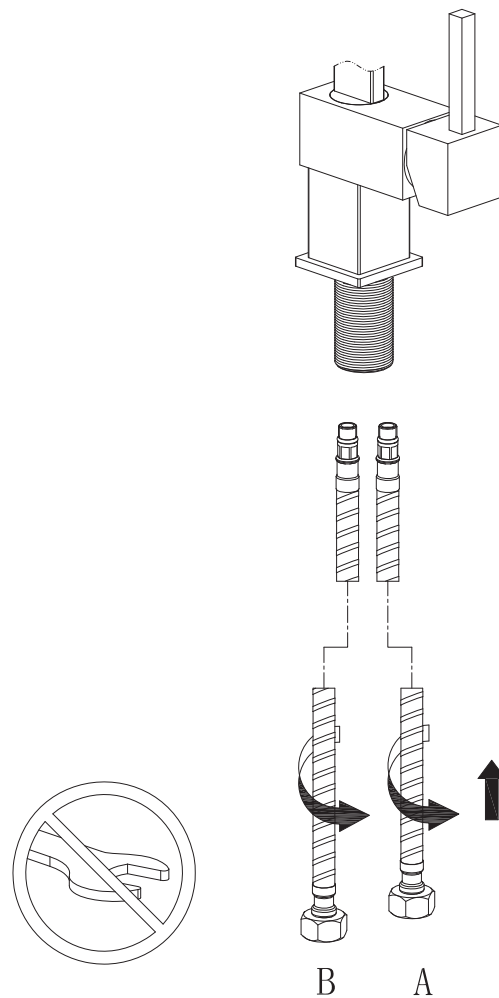

В случае если давление воды будет превышать 8 бар, рекомендуется установка редуктора (для уменьшения давления воды).

Abban az esetben, ha a nyomás nagyobb 8 bar-nál, ajánlatos a bejövő vezetékre egy nyomáscsökkentő felszerelése.

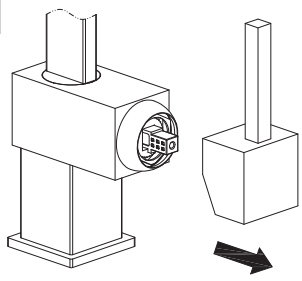

In cazul în care presiunea apei este mai mare de 8 bar, este recomandat să se instaleze un reductor de presiune în locul de alimentare al tevii.
